Abstract: Underwater image enhancement has been attracting much attention due to its significance in marine engineering and aquatic robotics. Numerous underwater image enhancement algorithms have been proposed in the last few years. However, these algorithms are mainly evaluated using either synthetic datasets or few selected real-world images.

Image enhancement technique plays vital role in improving the quality of the image. Enhancement technique basically enhances the foreground information and retains the background and improve the overall contrast of an image. In some case the background of an image hides the structural... Enhancing Underwater Image by Dehazing and Colorization.

Enhancement of Underwater Images: A Review

In this paper, we construct an Underwater Image Enhancement Benchmark (UIEB) including 950 real-world underwater images, 890 of which have the corresponding reference images. We treat the rest 60 underwater images which cannot obtain satisfactory reference images as challenging data.

technique on "Significance level of image enhancement techniques for underwater images,". Underwater imaging is fairly a demanding in the area of photography specially for low resolution and normal digital camera. There are some problems arise in underwater images such as partial range visibility, low

deep model for underwater image enhancement. The main reason is due to lacking of sufficiently labeled training data, which limits the development of deep learning based underwater image enhancement methods. In contrast, we propose a new underwater image synthesis method, and then design to offer a robust and data-driven solution to solve these issues.

wavelength. Underwater image suffers from limited range visibility, low contrast, non-uniform lighting, blurring, bright artifacts, color diminished and noise. The research on underwater image processing can be addressed from two different points of view such as an image restoration or an image enhancement method [1, 16-18].

Enhancement of Underwater Images: A Review

The degraded underwater images and videos affect the accuracy of pattern recognition, visual understanding, and key feature extraction in underwater scenes. In this paper, we propose an underwater image enhancement convolutional neural network (CNN) model based on underwater scene prior, called UWCNN.

Underwater Image Enhancement Using an Integrated Colour Model

In this section we follow the image formation model of Jaffe-McGlamery. According to this model, the underwater image can be represented as the linear superposition of three components (see Figure 1). An underwater image experiment consists of tracing the progression of light from a light source to a camera.

In order to get better results, we introduce a new underwater image enhancement approach based on multi-scale fusion strategy in this paper. In our method, we first obtain the restored image on the base of underwater image model. Then we get the white balance and contrast enhancement image of the restored image respectively.
