Applying the second of the given boundary conditions shows that the function $()f t$ has the following value: $2 ()f t R R$ Thus the radial velocity in the fluid at any distance r from the sphere at any time t will be: $2 2 (,) R R r t r r$ Integrating the foregoing equation with respect to r yields the result: $2 (,) () R R r t g t r$ where $()g t$ is some function of time.
